

Phase 1 - Brainstorming & Ideation

FitBuddy was proposed as a web-based AI application that creates personalized fitness plans. The idea focuses on using user fitness information and goals to generate a structured 7-day workout plan, nutrition/recovery guidance, and feedback-based updates.

Project Idea

- Develop an AI-powered personalized fitness plan generator.
- Use Google Gemini models to create structured fitness guidance.
- Provide a simple web interface for users to enter their information.

Main Features Identified

- Personalized 7-day workout plan.
- Nutrition or recovery tip based on the selected fitness goal.
- Feedback-based modification of an existing workout plan.
- Admin/coach view for registered users and their plans.

Expected User Scenarios

- A user enters personal details and receives a customized workout plan.
- A user submits feedback such as adding cardio or rest days and receives an updated plan.
- A user requests a nutrition or recovery suggestion related to the fitness goal.
- An administrator or coach views stored users and workout plans.
