

Phase 2 - Requirement Analysis

The requirement analysis phase identifies the information, technologies, functionality, and resources required to develop FitBuddy.

User Requirements

- Name / username and user ID.
- Age and weight.
- Fitness goal such as weight loss, muscle gain, or general wellness.
- Preferred workout intensity: low, medium, or high.

Functional Requirements

- Generate a structured 7-day workout plan.
- Generate concise nutrition or recovery tips.
- Accept feedback and update the original workout plan.
- Store user information and generated plans.
- Display stored users and plans through an admin view.

Technical Requirements

- Python programming.
- FastAPI framework.
- Google Gemini API.
- SQLite database with SQLAlchemy.
- HTML, CSS, and Jinja2 templates.
- Uvicorn ASGI server.
- Virtual environment and pip for dependency management.
