

Phase 4 - Project Planning Phase

The planning phase organizes the development into milestones and prepares the environment, project structure, dependencies, and deployment process.

Development Milestones

- Milestone 1: Model selection and application architecture.
- Milestone 2: Core functionality development.
- Milestone 3: routes.py development.
- Milestone 4: Frontend development.
- Milestone 5: Local deployment and verification.

Environment Setup

- Install Python and pip.
- Create a virtual environment.
- Install required libraries using requirements.txt.
- Configure the Gemini API key through environment variables.
- Prepare the FastAPI and Uvicorn development environment.

Planned Project Structure

- app/ - Python backend files.
- templates/ - HTML/Jinja2 pages.
- static/ - CSS and image assets.
- tests/ - application tests.
- requirements.txt - Python dependencies.
- .env - environment configuration.
