

Phase 5 - Project Development Phase

The development phase implements the core AI, backend, database, routing, and frontend components described in the FitBuddy documentation.

AI Development

- Implement workout-plan generation using Gemini.
- Generate a day-by-day plan containing warm-up, main workout, and cooldown/recovery guidance.
- Generate concise nutrition or recovery tips.
- Implement feedback-based workout-plan updates.

Backend Development

- Create FastAPI application and routes.
- Process user form data with FastAPI Form parameters.
- Use Pydantic schemas for structured input validation.
- Connect route handlers to Gemini functions.
- Render dynamic HTML responses with Jinja2.

Database Development

- Store user information in SQLite.
- Store original workout plans.
- Store feedback-based updated plans separately.
- Retrieve users and plans for the admin view.

Main Routes

- / - homepage.
- /generate-workout - generate the personalized plan.
- /submit-feedback - update the plan using feedback.
- /view-all-users - display the admin view.
